Disclaimer

The information shared in this whitepaper is not all-encompassing or comprehensive and does not in any way intend to create or put into implicit effect any elements of a contractual relationship. The primary purpose of this white paper is to provide potential investors with pertinent information in order for them to thoroughly analyse the project and make an informed decision. Prior to using or investing in the Mutant Wars NFTs and ecosystem, we strongly advocate a careful study of the Project. Certain statements, estimates and information featured in this white paper are to be taken as variable, whilst everything will be done to achieve goals and be as close to what is laid out in the White paper should unforeseen circumstances and issues come in the way the project will adapt and change to overcome those challenges whilst trying to stay true to the original goal and continue to grow.

Overview

What is “Mutant wars”?

The "Mutant Wars" project revolves around an exceptional collection of NFTs that are designed to offer numerous opportunities for growth and expansion. The NFTs are set in a post-apocalyptic world where various humanoids, cyborgs, mutated apes, and zombies compete to become the dominant species. This narrative provides a wealth of creative avenues for development, in addition to being a visually striking and unique NFT set.

While all the potential avenues for the project's growth cannot be disclosed at this stage, the focus will be on creating something innovative and bringing new elements to the NFT ecosystem, while also incorporating established features that have proven to be successful, such as staking. With this set, the artwork and its utility will go hand in hand.

NFTs

The scope and size of the NFT set is without question, impressive. Upon completion of the NFT Mints there will be;

16 Base Characters

Over 350 Traits

10 Specials (1 of 1 NFTs)

14000 NFTs in Total

The NFT mints will be split as follows.
(Explanation as to why will follow)

- Initial Mint – 10000 NFTs
 - ▶ 10 Bases
 - ▶ 8 Special
- Second Mint – 2000 NFTs
 - ▶ 3 Bases
 - ▶ 1 Special
- Third Mint – 2000 NFTs
 - ▶ 3 Bases
 - ▶ 1 Special

Why 3 Mints?

It fits in nicely with the Narrative for the project of ongoing battles for survival and dominance of earth, of the introduction of different characters and opening up the possibility of different alliances and enemies. Again, this is a directional play for a story telling/comic book theme that may be taken in the future.

On top of that it provides staggered income into the project for further development. Each mint will coincide with the release of a version of the PvP Battle feature.

Battle feature

The "Battle Feature" in the "Mutant Wars" project offers exciting player-versus-player action. For the initial version, players will choose their NFTs and create a "Bounty" challenge. Battles will take place between teams of 1 to 5 NFTs, which will be kept hidden from potential opponents. If a rival accepts the challenge, they match the bounty, and the battle commences. The winner takes home 95% of the combined bounty, with the remaining 5% going towards future development.

The first version of the game will feature a straightforward rarity and level-based battle system. Subsequent versions will add more complexity, drawing on the project's story narrative to introduce new elements such as elemental multipliers and alliance bonuses.

In the "Battle the Bank" mode, players can attack the bank with their NFTs for a chance to win the jackpot or other prizes. The pay-outs will be determined by a randomizer and there will be a small fee to play each time, per NFT.

The "Naming Portal" feature allows NFT holders to change the name of their NFTs as they appear in the game and on supported marketplaces. To do this, the NFT must be in the player's wallet and they must pay a small fee. This feature adds a personal touch to the NFTs, allowing players to choose names like "The Destroyer" or "Merchant of Doom" instead of generic names like "3257" or "1890."

Staking, levelling and Mutant Coin

Upon completion of the initial 10'000 mint staking and levelling will be enabled. A tried and tested UI and platform will be utilised for this that is attractive, intuitive and user friendly. The Staking is where you will be able to earn the Mutant coin, used to level up and make your Mutants more powerful for the impending battles ahead.

Mutant coin will also be earnable by providing liquidity to third party DEX's and staking your Liquidity Provider tokens, a tutorial will be provided for people who are unsure what this is when needed. Thus bringing in another earning potential to the protocol.

NOTE : LP providing is not without risk, please ensure you are aware of them before partaking in this feature as it is at your own Risk.

Development Running Order

Rather than have a Generic roadmap that is Rarely fulfilled or delivered on, what will be provided is a provisional initial Development Run list, this may be subject to some changes. Developments will be completed as soon as possible, but no specific timeline will be given until solid release dates are 100% able to be Hit.

- Staking
- Liquidity incentive pool
- Naming portal
- Battle the Bank
- Levelling
- PVP V1
- PVP V2 + 2K mint
- PVP V3 + 2K mint

Upon completion of these, further developments will be undertaken to carry on adding value to the Ecosystem and to innovate. Whilst there are a lot of directions that can be taken due to the size and scope of the Collection, each further development will be scrutinized to ensure its financially viable, makes sense for the vision of the community and is something that the community would enjoy.

Final Say

If you are still reading then congratulations for taking the time to go right through the white paper, most people don't make it past the first page of any of them. AS stated at the beginning it is important not to over promise and set unachievable goals, as such everything laid out above is something that has been discussed with a high level team of developers who will be working on the project who believe it is all achievable. Though there are sure to be bumps in the road that is to be expected and no journey worth taking is to be easy.

Revenue is extremely important to any project for the continuation of its development, as such the protocol is set up to be fun to use with some unique features that will also continue to bring in funds after the initial mints. This will always be the theme so that ultimately the project never stops growing and developing.
